## PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience **shipping production features** and **scaling ML-powered systems used by 120M+ users**. Experienced in end-to-end development of internal SDKs, full-stack applications, and developer tooling. Skilled in rapidly **prototyping 0→1 products**, optimizing ML pipelines, and shipping reliable, scalable systems in startup-like environments. Adept at TypeScript, Node.js, React Native (including bridgeless architecture), and Python. Passionate about developer experience, open-source collaboration, developer-friendly APIs and building robust, user-facing systems from the ground up.

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, TypeScript, SQL, Node.js, C++

**Frameworks & Libraries:** React, React Native, TensorFlow/LiteRT, AWS (microservices), CI/CD (GitHub Actions, Jenkins)

**Tools & Methodologies:** Agile/Scrum, A/B Testing, Telemetry Monitoring, CUDA, Git

## EXPERIENCE

### Software Engineer (Contract)

San Francisco, CA

Sony Interactive Entertainment

Jul 2024 – July 2025

- Developed and maintained internal SDKs and C++ libraries powering **PlayStation's machine learning deployments on console**, enabling real-time inference and seamless integration with platform services used by millions of devices worldwide.
- Implemented the **first-ever native-level cross-platform UI framework** in TypeScript by extending React Native's **bridgeless architecture**, reducing cross-device bugs by 30% and improving runtime consistency.
- Deployed and monitored **over-the-air ML updates** across all consoles, expanding coverage from 5% → 100% through automated rollout and version tracking.
- Verified and optimized **TensorFlow Lite pipelines on CPU and GPU** via unit and integration testing, increasing inference reliability and reducing post-deployment defects by 35%.
- Conducted **A/B testing and performance analysis** across console environments to optimize model accuracy, latency, and end-user experience.
- Integrated **LiteRT and TensorFlow Lite runtimes** into console SDKs, validating inference reliability and optimizing runtime performance for **real-time, user-facing AI systems**.
- Contributed to internal open-source SDKs** improving ML model onboarding, prototyping pipelines, and developer tooling reliability.

### Software Engineering Fellow

San Francisco, CA

Google

Nov 2024 - Feb 2025

- Refactored UI components for performance and accessibility, shipping features **3 weeks ahead of a 2-month deadline**.
- Scoped and prioritized UI redesign tasks with product and engineering leads, delivering iterative improvements that supported **5 high-impact feature launches**.

### Full-Stack Engineer (Contract)

San Francisco, CA

Techtonica

Nov 2022 - Dec 2023

- Built and scaled React-based curriculum tools supporting **600+ developers** using **React, TypeScript, Node.js, RESTful APIs**, and **PostgreSQL**, ensuring robust, production-ready applications.
- Design and implement **OpenAPI specifications, database schemas, queries, and API endpoint logic**.
- Led agile scum meeting for a cross-functional team of 14 engineers across multiple initiatives, driving alignment through **daily stand-ups, sprint plannings**, and ensuring **on-time delivery of key deliverables**.
- Championed rollout of **React Testing Library** as part of a broader quality strategy, leading cross-functional coordination to **increase test coverage by 70%** and improving application stability, and long-term maintainability.

### Software Engineer

Berkeley, CA

EDGE in TechTM Initiative at UC Berkeley

Aug 2021 - May 2022

- Developed responsive UI components in React for **web applications** showing large-scale data visualization of millions of testing records.
- Maintained **Python-based data analysis tooling**, identifying correlations with ed-tech integrations and demonstrating significant improvements in test scores ( $p < 0.001$ ).

## PROJECTS

### Financial Intelligence Multi-Agent System

2025

Developed an end-to-end AI platform aggregating news, social media, SEC filings, and market data for real-time financial insights using **Python, FinNLP, OpenAI**, and multi-agent architecture.

### AlgoMate

2025

Built a PERN stack interview prep tool that validates users via Auth0 and Codewars APIs, then schedules personalized coding challenges with automated reminder emails, leveraging PostgreSQL for user data and preferences.

## EDUCATION

### University of California, Berkeley

*B.A. (Human Computer Interaction)*

**Coursework:** Natural Language Processing, Python, Git, Linux, Data Analysis, Web Development

**Additional Awards:** UC Regent's Scholar (awarded top 1% merit scholarship), Software Engineering Certificate (2023)
